

KreatBio Company Overview

KreatBio connects wet-lab sample preparation with sequencing analysis training for research and academic environments.

Why KreatBio exists

Many teams can generate DNA. Fewer teams can train new analysts quickly enough to work confidently with sequencing outputs. KreatBio was built to connect those two workflow points inside one supplier relationship.

What the company builds

- KodaPure magnetic-bead DNA extraction kit
- KodaGeno interactive sequencing analysis training
- Institutional partnership programs for cohort deployment

Market context

KreatBio products are supplied for research use. Destination-specific shipping details and request-only documents are confirmed during quotation and order review.

Public leadership profiles and additional company materials are shared during active review.
